

Portfolio Maintenance Plan

Internship Task Submission

VisionGuard AI – AI-Powered CCTV Investigation System

Prepared by: Muhammad Ahsan

Internship Project: VisionGuard AI – AI-Powered CCTV Investigation System

Date: August 2026

1. How I Will Add My Next Case Study

My portfolio is organized as a repository with a dedicated “Projects” section, where each case study appears as its own page linked from the main index. When I add my next case study, it will sit directly above my current VisionGuard AI entry, keeping the portfolio in reverse chronological order so the most recent work is always the first thing a visitor sees.

The process I will follow each time is straightforward and repeatable:

- Open and update the portfolio repository. I'll pull the latest version of my repository locally, create a new branch for the update, and make sure my development environment is set up correctly before making changes.
- Create a new Case Study section. I'll duplicate the existing page template so the new entry matches the layout, typography, and structure already used for VisionGuard AI.
- Follow the Week 2 three-beat structure. Every case study is written around three parts: the Problem I was trying to solve, What I Did to solve it (tools, technical approach, key decisions), and the Outcome — what actually changed or improved as a result.
- Add screenshots or supporting visuals. Where possible, I'll include interface screenshots, architecture diagrams, or short clips demonstrating the feature in action, since visual evidence makes the work easier to evaluate at a glance.
- Review the content for accuracy and consistency. Before publishing, I'll proofread the text, check that technical details are correct, and confirm formatting matches the rest of the portfolio.
- Publish the updated portfolio. Once reviewed, I'll merge the branch, deploy the update, and confirm the new case study link appears correctly on the homepage.

Keeping this process short and consistent means I can realistically repeat it every time I complete a new project, rather than treating portfolio updates as a one-off task.

2. My Next Planned Case Study

The next case study I intend to add is **VisionGuard AI – Real-Time Live CCTV Monitoring & Intelligent Alerts**.

This update will extend my original VisionGuard AI system, which currently analyzes recorded footage, into a live monitoring tool. Planned additions include:

- Live camera integration
- Real-time AI object detection
- Intelligent safety and security alerts
- Investigation timeline improvements
- Performance optimization
- Enhanced reporting features

This is the logical next step for my portfolio because it builds directly on a system I've already documented, rather than starting an unrelated project from scratch. It demonstrates growth in the same domain — CCTV-based investigation and monitoring — while showing that I can extend a working system with more advanced, real-time capabilities.

3. Reminder Evidence

To make sure portfolio maintenance doesn't get overlooked once the internship ends, I've set up a recurring reminder:

Reminder Type	Google Calendar
Reminder Title	Review Portfolio and Add New Case Study
Schedule	First Saturday of Every Month
Time	6:00 PM
Purpose	Review completed work and publish any new case study using the same portfolio structure.

4. Preserving My Claude Project

I will continue using my existing Claude Project rather than creating a new one for future updates. It already contains:

- My writing style

- My technology stack (FastAPI, Python, OpenCV, YOLO, HTML/CSS/JavaScript, SQLite)
- My portfolio structure
- My personal identity kit
- My previous case studies

Keeping this context in one place means I won't need to re-explain my background or technical setup every time I sit down to write a new entry, which makes future updates faster and keeps the tone and technical depth consistent across the whole portfolio.

Conclusion

This maintenance plan gives me a clear, repeatable way to keep my portfolio current after the internship ends. With a defined process for adding case studies, a concrete next project already identified, a recurring reminder in place, and my existing Claude Project preserved for consistency, I'm confident my portfolio will stay organized, up to date, and ready to present to future employers or clients.
